

Folding

For compact storage

1. Lay your carrier out flat, main side up. Ensure hood is folded down over body.

2. Fold carrier in half lengthways. The reverse side will now be showing.

3. Roll the waistband up over the top of the body.

4. Continue rolling the carrier until you reach the shoulder straps.

5. Fold the shoulder straps down over the body

6. Wind the shoulder straps around the body until the entire length has been used. Clip (or tie) the webbing / waist straps back over the carrier to secure.

This is how we fold your carrier when sending it to you. It takes up very little space, both in length and width, and is our preferred method for folding.
